

## ERRATUM

# Harris J. Febrile Infant Hospitalizations: When Is the Right Time to Discharge? *Hospital Pediatrics*. 2018;8(7):438-440

A mathematical error occurred on page 439, column 1, second paragraph, first sentence. The sentence reads: "Extrapolating from these data, if the baseline rate of bacteremia is ~10% for an ill-appearing febrile young infant and 2% for one that is well appearing, then ~0.7% (1:140) of ill-appearing infants will have their culture turn positive within 24 hours (7% of 10%), and 0.5% (1:500) will turn positive after 36 hours (5% of 10%)."

This sentence should have read: "Extrapolating from these data, if the baseline rate of bacteremia is ~10% for an ill-appearing febrile young infant and 2% for one that is well appearing, then ~0.7% (1:140) of ill-appearing infants will have their culture turn positive within 24 hours (7% of 10%), and 0.5% (1:200) will turn positive after 36 hours (5% of 10%)."
